

## Jupiter. 350cc's. 270£'s.

### Jupiter. 350ccs.

The Jupiter is the bike big enough to keep up with the big machines, and just small enough to save you a heavy insurance bill.

You'll find it will cruise all day on the highway at a comfortable 60 or manoeuvre you speedily to work through any traffic jam.

It was also designed for easy maintenance, (for instance, the rear mudguard, number plate, seat and tail light come away as one unit which makes the rear wheel very easy to work on indeed) and an extensive tool kit is supplied with the machine.

And you'll have to agree that the Jupiter is a very attractive motorcycle, in both price and looks. It costs £270.00 including VAT and comes in a choice of three colours.
