

**Ural. 650cc's. 425£'s.**

## Ural. 650cc's.

The Ural 650 is the kind of motorcycle that will start up first thing in the morning without any trouble, get you to work on time or cruise along the motorway at a comfortable 70. All day.

And you'll still have another 15 on top of that to get you out of trouble.

The machine is shaft driven, for reliability, just like other famous bikes.

And it was designed for owner maintenance. It is easy to work on and an extensive tool kit is part of the standard equipment.

Spares are cheap, but you hardly ever need them. This bike was designed for rugged country. From the below freezing temperatures of Northern Europe to the heat and dust of the Australian outback.

And, if you wish, you can add a sidecar that is designed to fit the bike perfectly. The sidecar is available now, not in two years time. It will cost you an extra £115 including VAT.

There are four colours to choose from, and the solo motorcycle will cost you £425 including VAT.

A small price to pay for freedom.
